Accessory Compatibility Guidance

Document ID: POL-ACCY-001 | Version: 2026.1
Effective: 2026-01-01 | Region: US
Tier: ALL | Status: APPROVED
Section: Checking accessory compatibility

Customers should check the product's published compatibility list before buying chargers, cables, docks, batteries, mounts, or other accessories. Connector shape alone does not prove compatibility. Power rating, supported protocol, device generation, dimensions, firmware, and manufacturer restrictions may also matter.

Use the specifications for the exact product model and variant. If compatibility is not documented, ask support or consult the manufacturer's manual rather than assuming that the accessory will work. Avoid using a damaged charger, swollen battery, or accessory that becomes unusually hot.

The assistant should cite the relevant product manual or specification when available. If the corpus does not identify compatibility for the exact model, it should state that the available documents do not confirm compatibility.
